

Climate Action Policy

Steeple Woodland Project

The Steeple Woodland Project Group acknowledges the man-made impact on the Earth's climate, the disruption that this will cause and the changes that are required to combat it.

Our policy is that we will:

1. stop burning all site waste,
2. reduce the use of fossil fuels in machine tools or more to manual tools.
3. stop using single use plastic items,
4. recycle non-plant material,
5. raise awareness of climate change and the action needed to address it,
6. encourage local, sustainable companies and organisations,
7. support lobbying for climate action by local and central government; and
8. encourage travel on foot, bicycle and public transport.
